ASCO PROFILE

- Fire Alarm Systems :

ASCO represents a range of fire detection products manufactured by Simplex of USA.

Simplex fire alarm systems are probably one of the world's most complete solutions from any single manufacturer, whatever the requirements are from the smallest conventional system up to the largest fully integrated solution; Simplex has a solution to meet our client's needs.

Simplex diverse portfolio of components offers the highest degree of flexibility. This combined with a modular design and bus architecture, enable Simplex fire solutions to provide dynamic, economical and operational excellence. International certification to European Standards and a history of innovation and reliability have earned Simplex a reputation for powerful solutions of outstanding value.

Simplex uses robust, reliable, and environmentally adaptable products to provide an economical total cost of ownership over the lifetime of the system.

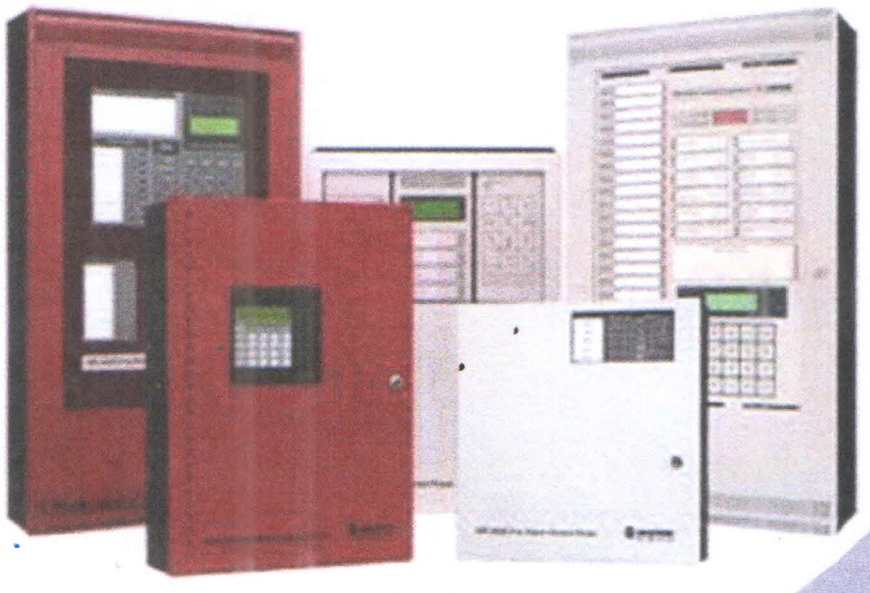

ASCO PROFILE

ASCO
advanced System company

Simplex has been pioneers in the field of detection technology from heat detectors to smoke detectors and in recent years to the introduction of multiple sensing elements in a single package.

Recently, technology has moved from red light to dual path detection for increased false alarm immunity and now into blue light technologies to replace ionization (radioactive) detection.

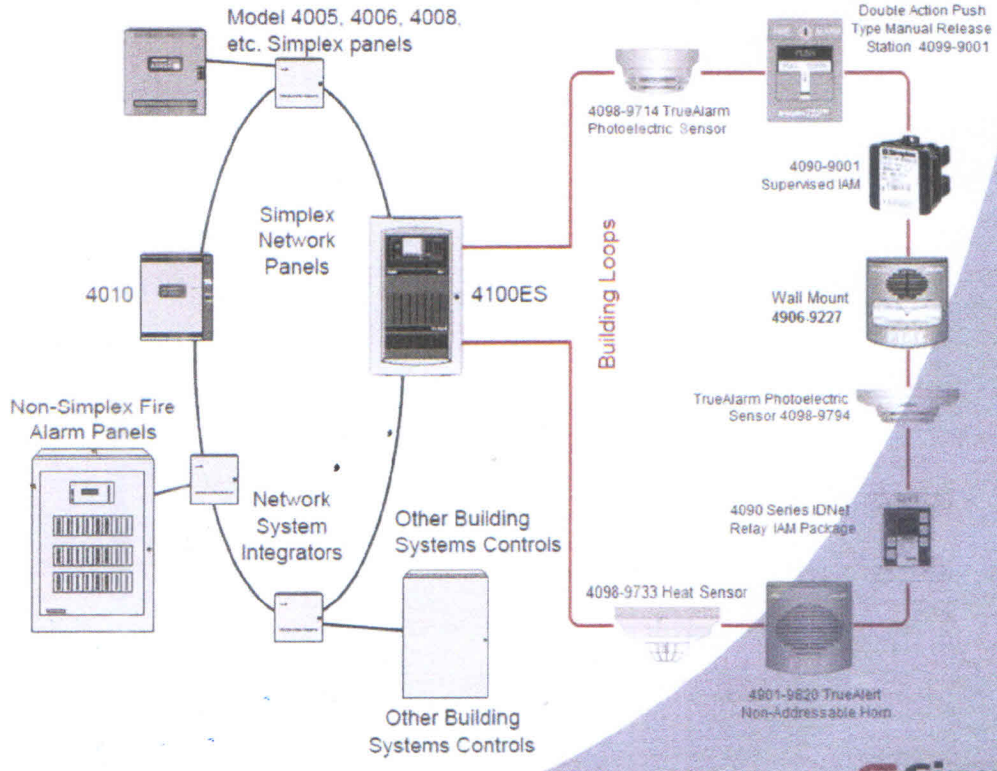

Simplex has a detector for every application damp rooms, dusty environments, malls, warehouses, large areas, airports, hospitals, clean areas, computer rooms, labs, power stations, water treatment plants and industrial installations.

Simplex

ASCO PROFILE

- Simplex provide quick and easy solutions for large areas and WAN such as: factories, hotels, and other tourist villages.
- The standalone panel supports 2500 addressable points.
- Each Loop accommodate 250 points without distinguishing between the detector or Module compared with other systems.
- Leading to reduce the number of loops, which in turn leads to reduce the effort and cost problems and potential faults.
- The network can cover 99 panel (4100es-4010- and with non-simplex panels) for 4.5 km.
- The address location in the base which facilitates installation and maintenance work.

ASCO PROFILE

ASCO
advanced System company

- Firefighting System

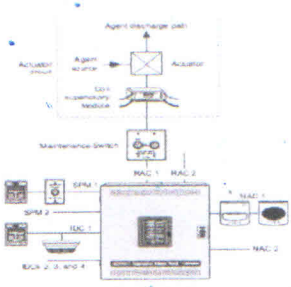

ASCO installs a halocarbon-based fire extinguishing agent. A relatively low concentration of halocarbon based agent is required to extinguish fires. It is commonly used on fire caused by electrical hazards and other relatively small risks.

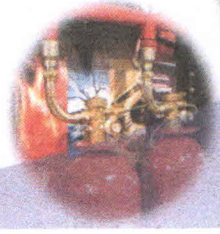

- FOAM System

Applications. Foam is also useful to prevent fire by covering flammable liquid spills before they become ignited. At Tyco Fire & Security Asia, we provide foam concentrates with numerous international and maritime approvals.

• Public Address and Conference Sound Systems

An essential feature of any facility is an effective sound system for distributing more than one sound program to each common area. The possibility of using the system to broadcast general or alarm announcements that can be activated even when the receivers are switched off adds value and usefulness to the sound system.

ASCO designs and installs simple and complex sound systems using a wide range of components from PASO of Italy. PASO is one of the few enterprises in this field able to boast their own original in house design, and manufacturing system for a full range of products, from the most sophisticated equipment to the simplest accessories.

Sound installations, particularly if they are complex, must be supplemented by sophisticated management and diagnostics. They must feature flexible selection of inputs and outputs and flexible interfacing with external peripherals. PASO conference systems are also found on boardroom tables, in parliaments and at congress facilities all over the world.
